Irrigation has been provided as needed to ensure optimal growth. weed control measures have been taken in the Black gram plots. To prevent the spread of insects, pests, and fungal diseases, spraying has been carried out: Black gram and Bengal gram fields: Neem oil (1ml/1 liter) + Carbendazim (1gm/1 liter). Groundnut plots: Imidachloprid (1.5 gm/1 liter water) fungicidal spray.
06	The sale of Bajra has commenced at a rate of Rs. 30 per kg, available to staff, trainees and contractual employees.
07	The installation and replacement of chain-link mesh around the colony area have been in progress. Work has now commenced around the residential area. The colony is now securely enclosed by the fence and work is ongoing at Type-V & IV side areas.
08	Excavation & cleaning works by JCB is currently underway along the fencing border lines to facilitate a boundary wall survey and HLC relocation survey areas. Clearing dense jungle and restoring uncultivated, stony and hillock areas to their original state for construction of Boys hostel. The area adjacent to the Akuledu village road and the hill-side patch is being cleared of unwanted vegetation, including bushes and thorns. The JCB is being utilized to clear jungle growth along the HLC canal water channels and sub-channels, ensuring maximum water harvesting to replenish water bodies and farm ponds within the premises. Between 01.01.2024, and 23.12.2024, the JCB accumulated 182.8 operating hours over a period of 22 days.
09	The office garden, encompassing the hedge, lawn, avenues, ornamental plants and estate plantations, is being meticulously maintained to ensure beauty and charm. maintenance activities include: Hedge shaping, Lawn mowing, Strategic placement of pot plants to enhance the garden's greenery and aesthetic appeal and creating a welcoming and serene atmosphere.
10	Inter-culture activities are being carried out in the Coconut, Mosambi, Mango and Sapota orchards. It help control weeds under the tree canopies, improve water absorption by the main trees, enhance soil pulverization and ultimately contribute to increased production.
11	Weeding operations have been successfully carried out in the Sapota, Lemon, Mango, Drum stick and Coconut plantations, removal of weeds grown between the rows has done. This to promote healthy plant growth, prevent weed competition.
12	the areas surrounding the Guest House and temple, the colony premises, manicured by the Brush cutter operations. This maintenance effort aimed to maintain a neat and aesthetically pleasing environment within the colony.
13	Regular maintenance of PVC pipelines was carried out, focusing on the overhead tank area, near park side, colony areas, Sapota orchard and Coconut orchard. attended the fitting and repair of various pipeline works timely ensuring water supply.
14	Regularly collect and remove dry coconut leaves, ensuring the area remains clear of debris and hazardous materials. To facilitate seamless field operations, drip laterals were carefully folded and secured. thoroughly cleaned the orchard with cultivators and weeders , eliminating weeds and preventing regrowth.

15	To ensure the optimal growth and development of our newly planted saplings and recently planted plants, including Coconut, Neem, Peepal and Tamarind, providing regular water tanker services. plants could receive adequate hydration, even during periods of water scarcity and sets them up for healthy establishment.
16	Ploughing operations have been done in the teak orchard using cultivators, thorough weeding was carried out in the gaps within the orchard, ensuring a clean and weed-free environment. utilized cultivators to till the outer fields in the B Zone area, as part of our comprehensive cleaning and maintenance program to maintain optimal farm conditions.
18	The drip irrigation system undergoes thorough inspections to ensure optimal performance. Cleaning of the system to prevent clogging, Replacement of damaged micro tubes, drippers and lateral lines. For the healthy growth and development of our diverse crop portfolio, which includes Sapota, Coconut, Mango, Custard Apple, Mosambi, Drumstick and Lemon. By prioritizing the upkeep of our drip irrigation system, we can maximize water efficiency, reduce waste.
19	Various miscellaneous tasks and assignments as instructed by the competent authority on an as-needed basis. prioritize flexibility and responsiveness to ensure timely completion of all assigned tasks.

NOTE: The F.P.D.C committee seated on 24th July 2024, addressed the current agricultural challenges arising from an extended dry spell. It is for almost 52 days. The committee deliberated group discussion on the significant impact of prolonged dry weather and the affect on farm production and productivity. It was concluded that involvement of an external subject expert is necessary. in response to the office letter No: 17-01/2023-Farm, the Mandal Agriculture Officer (M.A.O) of Garldinne Mandal had visited the farm. The M.A.O reported that the crops of the Institute, Garldinne region, are in a dire state. Many crops have not germinated fully, the germination is not occurred properly and the germinated seedlings are weak and lack vitality.

NOTE: The DANA cyclone, which struck just before the harvesting stage, caused significant damage to crops. rains led to physical damage, including lodging and discoloration of grains, particularly in Jowar and Bajra. Jowar experienced noticeable discoloration, potentially compromising its quality and yield. The cyclone's timing worsened the situation, as it effect occurred from Dt: 19.10.2024 to 26.10.2024 and resulting in crop loss and a decline in overall productivity. This has had a direct impact on both the quantity and quality of the harvest, posing challenge for farm production.

NOTE: The training and testing sections are collaborating seamlessly in the farm's fodder fields and plant debris plots. The testing section is conducting rigorous trials of machinery, including the slashing and chopping of fodder grass using a slasher machine. Meanwhile, the training section is providing live demonstrations of these operations, engaging trainees in hands-on experience directly in the fields. The chopped and slashed fodder, along with plant debris, will undergo rotavation to incorporate these materials into the soil, enriching it through composting. As part of our commitment to sustainable practices, the farm is transitioning towards organic farming methods.
